These lists are under evaluation by ECHA and may subject to change in the future.
- (2) In accordance with Regulation (EC) No 1907/2006, any EU producer or importer of articles shall notify ECHA, in accordance with paragraph 4 of Article 7, if a substance meets the criteria in Article 57 and is identified in accordance with Article 59(1) of the Regulation, if (a) the substance in the Candidate List is present in those articles in quantities totaling over one tonne per producer or importer per year; and (b) the substance in the Candidate List is present in those articles above a concentration of 0.1% weight by weight (w/w).
- (3) From 28 October 2008, EU & EEA suppliers of articles which contain substances on the Candidate List in a concentration above 0.1% (w/w) must provide sufficient information, available to them, to their customers and on request to a consumer within 45 days of the receipt of this request. This information must ensure safe use of the article and, as a minimum, include the name of the substance.
- (4) If a SVHC is found over the reporting limit, client is suggested to identify the component which contains the SVHC and the exact concentration of the SVHC by requesting further quantitative analysis from the laboratory.

TEST RESULT

Notes:

- 1) ND = not detected, less than MDL
- 2) MDL= Method Detection Limit;
- 3) Tests are performed in mixed components.
- 4) The table above only shows detected SVHC, and SVHC that below MDL are not reported.
- 5) The results represent the worst case scenario of SVHC concentration in the tested components, which are calculated with the number of components in the composition test and the determined concentration. Confirmation test of individual component is recommended in case the threshold 0.1% is exceeded.
- 6) The test results are based on the calculation of selected element(s) / marker(s) and to the worst-case scenarios. Further confirmation and quantitative analysis are recommended to determine the SVHC sources.
- 7) * - The concentration of list substances were calculated as selected element(s).
- 8) # - The concentration of Bis(tributyltin) oxide TBTO and Dibutyltin dichloride DBTC were calculated based on Tributyltin, TBT and Dibutyltin, DBT amount in sample, respectively. The result covers TBTO with other salts of TBT and DBTC with other salts of DBT under current technologies. Further investigation is required to determine the exact amount of TBTO and DBTC in sample.
- 9) ^a - The anthracene oil derivatives are complex and consists of variable compositions of Polycyclic Aromatic Hydrocarbons (PAHs) and Carbazoles. The amount of Anthracene oil derivatives are calculated by the composition of PAHs and Carbazoles found in sample.
- 10) ^b - The substance does only fulfil the criteria of REACH Art. 57 (a) if it contains Michler's ketone (CAS Number: 90-94-8) or Michler's base (CAS Number: 101-61-1) in a concentration $\geq 0.1\%$ (weight / weight).
- 11) According to client's request, tests are combination tests. The experimental results are the total result of mixed samples.
- 12) NA = The submitted sample was found to contain significant amount of specific element(s) of SVHC. Upon further information provided from client, the possibility that the element(s) content originate from SVHC is very unlikely, even though their presence cannot be excluded entirely. It may be assumed that the detected element(s) have a non-SVHC source.
